

KEMPER PRO-LINE Tools

1230 E. Mermaid Lane
Wyndmoor, PA 19038

All of Kemper's PRO-LINE tools are made with "knife quality" high carbon steel and select hardwood handles. The tools have brass ferrules and are firmly set with industrial adhesives to keep them from coming loose. In addition, each handle is immersed in an oil resin bath to seal the handle from water damage and prolong the life of the tool.

Because the blades of the tools are made from high carbon steel, they should be kept clean and dry when not in use.
